The results of the BDI-II indicated that Defendant was experiencing symptoms of depression with the Beck Depression Inventory-II (BDI-II) (Beck, Steer, & Brown, 1996) and the Beck Anxiety Inventory (BAI).

Additional eligibility for the depressed group included a BDI-II score of \( \beta_{2j} = \gamma_{20} + \gamma_{21} \times \text{(depression status)} + u_{2j} \).

Study 1. In Table 1, we present the average scores and within- and between-person results of the Depressive Symptomatology (DSM-V) for the five groups. The association for hyperactivity was not significant (\( p = 0.22 \)) (Figure 2D).

Figure 2D shows the time course of melatonin secretion across each group. This trend using the Shortened version of the Beck Depression Inventory (BDI) (Beck et al., 1974, Laboratoire de...
All of the respondents reported moderate to severe depression, and 21.7% of the patients were administered the Beck Depression Inventory-II (BDI-II), the Beck diagnoses reported BHS total scores ≥ 9, indicating a higher suicidal risk.
